

I work at both a hospital & a Family Health Team. The FHT has medical directives to cover all aspects of the increased scope of practice. I understand this is the case in many FITs . So if it is already in practice, it would be nice to get rid of all the paperwork that is presently required. At the hospital I work at, I am severely handicapped in delivering care without these medical directives, the hospital feeling it is too much paperwork to make it happen. If the expanded scope of practice was in effect, there would be no need of medical directives, and patient care would improve.
