

I wanted to express my support of an expanded role for pharmacists in the province. As a practicing pharmacist at the primary care setting (Thames Valley Family Health Team - Strathroy, ont.) I am very aware of what is accomplished by the use of other regulated health professionals to fill in the gaps in the primary care system.

The pharmacist in the community and the FHT setting is very well situated due to high accessibility and high level of knowledge and training.

I understand that many pharmacists may not choose to operate in an expanded role for a number of reasons but those that do should be allowed to to better care for the people/constituents of Ontario.

Thank you,

Tom
